

AI Governance, Sovereign Compliance & Operational Platform for Telecom Infrastructure

A turnkey, enterprise-grade governance and continuous compliance software platform—backed by CIS's 750+ engineering team—engineered to operationalize and automate complex Satellite (NTN), 5G/Fibre, Cloud, and OSS/BSS deployments for Intellilink Media and your clients.

PROSPECTIVE CLIENT	CLIENT COMPANY	VENDOR / PROVIDER	DELIVERY CAPACITY
Emmanuel Mukwesa (CEO)	Intellilink Media (Zambia)	Cyber Infrastructure (CIS)	750+ Full-Stack Engineers

1. The Challenge vs. What CIS Delivers to Intellilink

Executive Summary

Emmanuel's Operating Principle: "Technology deployment alone is not enough. Telecom operators and enterprises require the institutional capability to integrate, govern, monitor, and operate converged infrastructure (Fibre + Satellite/NTN + Cloud + AI)."

Building custom governance, regulatory telemetry, and NOC systems from scratch costs millions of dollars and takes 18+ months. ****CIS provides Intellilink with a fully functional, production-ready AI Compliance & Operations Platform today**, plus dedicated engineering teams to customize and integrate it across any MNO or enterprise network.**

INTELLILINK CLIENT NEED	WHAT CIS SELLS & DELIVERS	DIRECT BUSINESS ROI FOR INTELLILINK
Telecom Regulatory & Licensing Compliance	Automated compliance engine pre-mapped to ISO 27001, SOC 2, NIST CSF, and Regional Telecom Acts with continuous programmatic control evaluation.	Enables Intellilink to deliver instant compliance readiness to MNO clients, eliminating months of manual audit preparation.
Data Sovereignty & Lawful Interception	Cryptographic live telemetry ledger, signed JSON evidence snapshots, and immutable SHA-256 digests verifying data residency across satellite/edge nodes.	Provides indisputable mathematical proof to national telecom regulators that subscriber data remains strictly within sovereign borders.
Converged Infrastructure Visibility (Fibre + NTN)	Real-time unified NOC dashboard connecting cloud APIs (AWS/Azure), GitHub CI/CD, identity providers (Okta/Google), and edge network gateways.	Delivers a single-pane-of-glass operational cockpit with 0 blind spots across hybrid satellite and terrestrial networks.
Custom OSS/BSS & Network Software Development	Dedicated CIS engineering teams (750+ pool) for custom OSS/BSS modernization, billing automation, AI operations, and cloud integrations.	Allows Intellilink to bid and deliver large-scale telecom execution contracts without hiring internal engineering armies.

2. Core Product Capabilities Ready for Immediate Deployment

Product Suite

TELEMETRY

Automated Infra Tests

Programmatic verification across AWS, GitHub, Okta, and edge gateways. Continuously monitors IAM MFA, branch protection, KMS encryption, and network access rules in real time.

AI FIX

1-Click Auto-Remediation

When an infrastructure misconfiguration is detected, the fine-tuned AI engine synthesizes Terraform IaC patches and executes live REST API corrections on connected cloud systems.

AUDIT EXPORT

Multi-Framework Packages

1-click compilation of certified ZIP audit archives (ISO 27001, SOC 2, NIST CSF, HIPAA, Master) with SHA-256 MANIFEST.json and versioned policies for regulatory sign-off.

3. Commercial Offerings & Engagement Models for Intellilink

Commercial Scope

OFFERING 1

Platform License / White-Label

What it is: Turnkey deployment of the AI Compliance & Governance Platform under Intellilink branding, deployed in a sovereign cloud, private cloud, or on-premise datacenter for your enterprise/MNO clients.

OFFERING 2

Custom OSS/BSS & NOC Build

What it is: Fixed-price or milestone-based engineering projects to design, build, and integrate custom telecom NOC dashboards, automated provisioning workflows, and AI decision engines into client networks.

OFFERING 3

Dedicated Engineering Pods

What it is: Dedicated full-stack, cloud, AI, and DevOps engineering pods (3 to 20+ engineers) assigned exclusively to execute Intellilink's telecom modernization and digital transformation roadmap.

4. 7-Minute Live Demo Walkthrough Script (For Emmanuel)

Demo Playbook

SCREEN / MODULE	WHAT WE DEMONSTRATE ON SCREEN	EXACT COMMERCIAL PITCH FOR EMMANUEL
1. Executive Cockpit /dashboard	Multi-framework readiness scores (ISO 27001, SOC 2, NIST CSF), live control matrix, and risk heatmaps.	"Emmanuel, this is the exact executive cockpit your MNO clients will use to visualize their continuous compliance posture, open risk exposures, and operational health in real time across hybrid cloud and edge infrastructure."
2. Programmatic Tests /tests	Real-time programmatic tests against cloud APIs. Click AI Fix to trigger automated remediation.	"Instead of finding compliance violations during an annual regulatory audit, this engine continuously tests cloud and code repositories, instantly generating Terraform patches and executing live API remediation."
3. Sovereign Evidence /evidence	Automated evidence collector pulling signed JSON payloads with timestamps and SHA-256 cryptographic hashes.	"For national data sovereignty, regulators demand proof. The platform automatically pulls signed, timestamped technical evidence directly from live systems, creating an immutable cryptographic audit ledger."
4. 1-Click Auditor ZIP /export & /reports	Download framework-specific ZIP packages (SOC 2, ISO 27001, NIST CSF, Master) and print-ready PDF briefs.	"When a telecom regulator or CPA firm audits the client, 1 click generates a certified ZIP package with versioned policies, live telemetry dumps, and an immutable MANIFEST.json for instant sign-off."

5. Sales Qualification & Discovery Questions for the Call

Closing Strategy

🎯 Immediate Client Projects

- "Emmanuel, for your current MNO, ISP, or government engagements, where is the immediate bottleneck in software delivery or compliance automation?"
- "Which regulatory frameworks (national telecom regulators, data protection, ISO 27001) are mandatory for your upcoming satellite/NTN deployments?"

⚙️ Commercial & Engineering Fit

- "Would you prefer deploying this platform as a white-labeled product for your telecom clients, or do you need a dedicated CIS engineering pod to customize it?"
- "What are the target timelines for your current client rollouts where CIS engineering can step in immediately?"
